# The accuracy of forecast grades for OCR GCSEs in June 2013 

Statistics Report Series No. 89

## Tim Gill and Yu Chang

July 2015

Research Division<br>Assessment Research and Development<br>Cambridge Assessment<br>1 Regent Street, Cambridge, CB2 1GG

## 1. Introduction

As a system of high-stakes public examinations operates throughout England and Wales, General Certificates of Secondary Education (GCSEs) are often the first formal qualifications to be obtained.
GCSE forecast grades are estimated grades provided by schools to the exam board prior to each examination session. Forecast grades are used as one source of information available to awarders when deciding on grade boundaries. They may also have a role to play in helping determine a final grade for a candidate whose script goes missing, or be used in special considerations and appeals.

This report presents an analysis investigating the accuracy of forecast grades of all OCR GCSE subjects in June 2013 in relation to the final grade. The forecast grades in this report are those reported by teachers to OCR in May 2013.

## 2. Overall accuracy of forecast grades

We firstly considered the percentage of accurate forecast grades given by the teachers. Table 1 shows that overall, the forecast grade in the June 2013 Session was correct $46.61 \%$ of the time. It is apparent that in general, forecasts were more often optimistic than pessimistic.
Table 1: Overall accuracy of forecast grades

| \%Accurate | 46.61 |
| :--- | ---: |
| \%Optimistic | 41.17 |
| \%Pessimistic | 12.22 |

Table 2 demonstrates that, in the vast majority of cases (89.14\%), the forecast grade was correct or was within one grade. Only $10.86 \%$ of the forecast grades were more than 1 grade out.

Table 2: Extent of inaccuracy of forecast grades

|  | \% | $\mathbf{N}$ |
| :--- | ---: | ---: |
| Within 1 grade | 89.14 | 644,987 |
| More than 1 grade out | 10.86 | 78,614 |

Overall, forecasts were more accurate for students achieving higher grades than lower grades (Table 3). In particular grade A* displayed by far the highest level of accuracy. This pattern is the most likely reason for the better accuracy in Independent schools and Grammar schools, where students achieve higher grades on average (see Table 8). The percentage of optimistic forecasts was higher at lower grades. Table 3 also clearly demonstrates the importance of grade C to students and schools, with more than $50 \%$ accuracy for grade C or above, compared with only around $20 \%$ accuracy if the grade is below C .

Table 3: Accuracy of forecast grades by final grade

| Final Grade |  | \%Accurate | \%Optimistic | \%Pessimistic | $\mathbf{N}$ |
| ---: | ---: | ---: | ---: | ---: | ---: |
|  | $\mathbf{A}^{*}$ | 67.21 | - | 32.79 | 59,618 |
| $\mathbf{A}$ | 57.61 | 20.03 | 22.36 | 114,882 |  |
| $\mathbf{B}$ | 53.58 | 31.15 | 15.27 | 154,773 |  |
| $\mathbf{C}$ | 55.20 | 38.92 | 5.88 | 177,020 |  |
| $\mathbf{D}$ | 26.40 | 69.39 | 4.21 | 113,437 |  |
| $\mathbf{E}$ | 22.04 | 73.17 | 4.79 | 54,773 |  |
| $\mathbf{F}$ | 17.96 | 77.06 | 4.98 | 28,679 |  |
| $\mathbf{G}$ | 18.04 | 79.78 | 2.17 | 13,716 |  |
| Total | 11.32 | 88.68 |  | 6,703 |  |
|  | 46.61 | 41.17 | 12.22 | 723,601 |  |

Results in Table 4 demonstrate the similar conclusion as Table 3. It shows that it's much easier for teachers to correctly forecast grade from A* to C (with $56.67 \%$ accuracy) than grades below C. Only $23.19 \%$ of the final grades below grade C were correctly predicted. It also shows that the percentage of optimistic forecasts was very high ( $72.60 \%$ ) at grades below C , whereas only $27.68 \%$ of forecasts were optimistic at grades $\mathrm{A}^{*}$ to C .

Table 4: Accuracy of forecast grades by final grade for $A^{*}-C$ and Below C.

| Final Grade | \%Accurate | \%Optimistic | \%Pessimistic | $\mathbf{N}$ |
| :--- | ---: | ---: | ---: | ---: |
| $\mathbf{A}^{*}-\mathbf{C}$ | 56.67 | 27.68 | 15.66 | 506,293 |
| Below C | 23.19 | 72.60 | 4.20 | 217,308 |
| Total | 46.61 | 41.17 | 12.22 | 723,601 |

## 3. Accuracy of forecast grades by subject groups

In this section, further analysis was undertaken by breaking down all the OCR GCSE subjects into 6 subject groups (refer to Appendix 1 for a list of the subjects in each group) and then carrying out analysis of prediction accuracy based on these groups.

Table 5: Accuracy of forecast grades by subject group.

| Subject Group | \%Accurate | \%Optimistic | \%Pessimistic | N |
| :--- | ---: | ---: | ---: | ---: |
| Arts | 55.85 | 32.38 | 11.77 | 38,279 |
| Business, Leisure \&Tourism | 43.39 | 45.85 | 10.76 | 21,200 |
| ICT/Technology | 47.01 | 43.13 | 9.86 | 31,262 |
| Languages | 51.50 | 37.92 | 10.58 | 103,170 |
| Science/Maths | 47.76 | 40.88 | 11.36 | 347,552 |
| Social Science | 40.02 | 44.53 | 15.45 | 182,138 |
| Total | 46.61 | 41.17 | 12.22 | 723,601 |

Table 5 shows the summary of accuracy of the forecast grades by subject groups. Arts and languages were the most accurate at forecasting GCSE grades with over $50 \%$ accuracy. Social Science was the least accurate with $40.02 \%$ accuracy.

Business, Leisure \& Tourism and Social Science were the most over-optimistic. Arts and Languages were the least over-optimistic.

In the next stage we investigated the accuracy of forecast grades for all the subject groups by final grade. The results are presented in Table 6. This also demonstrates that grade C is thought to be a critical grade for all the subject groups. In general, for all the subject groups, it appears much easier for teachers to accurately forecast grades higher than C than grades below C .

Table 6: Accuracy of forecast grades by subject groups and final grades.

| Subject Group | $\mathbf{A}^{*}$ | $\mathbf{A}$ | $\mathbf{B}$ | $\mathbf{C}$ | $\mathbf{D}$ | $\mathbf{E}$ | $\mathbf{F}$ | $\mathbf{G}$ | $\mathbf{U}$ |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| Arts | 72.99 | 64.24 | 60.46 | 63.38 | 36.89 | 31.21 | 27.31 | 26.63 | 20.93 |
| Business, Leisure <br> \&Tourism | 60.73 | 61.02 | 51.71 | 50.34 | 25.02 | 19.06 | 14.78 | 13.68 | 18.69 |
| ICT/Technology | 70.58 | 61.49 | 56.62 | 56.24 | 31.09 | 23.90 | 20.73 | 20.62 | 23.81 |
| Languages | 75.35 | 57.38 | 54.42 | 54.44 | 27.43 | 27.95 | 22.69 | 20.06 | 13.62 |
| Science/Maths | 66.33 | 60.21 | 55.89 | 58.28 | 26.29 | 23.32 | 20.96 | 21.59 | 10.62 |
| Social Science | 61.82 | 51.91 | 47.00 | 45.69 | 23.11 | 16.02 | 10.59 | 11.99 | 8.48 |

Figure 1 presents a comparison of the prediction accuracies at each grade between the 6 subject groups. Arts was the subject group with the highest prediction accuracy at almost all grades. Social Science was the subject group with the lowest prediction accuracy at almost all grades. It also shows that Business, Leisure \& Tourism had quite low prediction accuracy at most of the grades.

Figure 1: Comparison of the prediction accuracies between subject groups, by final grade.

Table 7: The extent of inaccuracy by subject group.

| Subject Group | \%accuracy extent within 1 <br> grade | \%inaccuracy by more than <br> grade | $\mathbf{N}$ |
| :--- | ---: | ---: | ---: |
| Arts | 92.96 | 7.04 | 38,279 |
| Business, Leisure \&Tourism | 87.60 | 12.40 | 21,200 |
| ICT/Technology | 90.13 | 9.87 | 31,262 |
| Languages | 94.02 | 5.98 | 103,170 |
| Science/Maths | 89.95 | 10.05 | 347,552 |
| Social Science | 84.02 | 15.98 | 182,138 |
| Total | 89.14 | 10.86 | 723,601 |

Table 7 represents the prediction accuracy by subject groups when we extend the prediction to within 1 grade. Languages had the highest prediction accuracy (94.02\%), whereas only 84.02 \% prediction accuracy was achieved for Social Science. There was a 10\% difference between Languages and Social Science. Around $90 \%$ prediction accuracy was achieved for other subject groups when accuracy was extended to within 1 grade.

## 4. Accuracy of forecast grades by school type

In this section the accuracy of the forecast grades by school types is investigated. Table 8 shows the accuracy of the forecast grades by school type. In general, Independent and Grammar schools were the most accurate at forecasting GCSE grades. Comprehensive schools were the least accurate, and also the most overoptimistic. Independent schools and Grammar schools were the least over-optimistic.

Table 8: Accuracy of forecast grades by school type

| School Type | \%Accurate | \%Optimistic | \%Pessimistic | $\mathbf{N}$ |
| ---: | ---: | ---: | ---: | ---: |
| City Academy | 46.62 | 40.75 | 12.64 | 223,943 |
| Comprehensive | 45.16 | 43.23 | 11.62 | 390,301 |
| Grammar | 53.15 | 33.52 | 13.33 | 19,441 |
| Independent | 54.83 | 30.85 | 14.32 | 61,056 |
| Secondary Modern | 47.27 | 40.76 | 11.97 | 15,499 |
| Others | 41.27 | 46.93 | 11.80 | 13,361 |
| Total | 46.61 | 41.17 | 12.22 | 723,601 |

We also investigated the accuracy of forecast grades for all school types by final grade. The results are presented in Table 9. This also demonstrates that grade C is thought to be a critical grade for all the school type. In general, for all the schools, it appears much easier for teachers to accurately forecast grades higher than grade C than grades below grade C .

Table 9: Accuracy of forecast grades by school types and final grades.

| School Type | $\mathbf{A *}(\%)$ | $\mathbf{A}(\%)$ | $\mathbf{B}(\%)$ | $\mathbf{C}(\%)$ | $\mathbf{D}(\%)$ | $\mathbf{E}(\%)$ | $\mathbf{F}(\%)$ | $\mathbf{G}(\%)$ | $\mathbf{U}(\%)$ |
| ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| City Academy | 64.89 | 57.89 | 53.25 | 55.26 | 26.26 | 21.01 | 17.44 | 16.68 | 12.95 |
| Comprehensive | 61.22 | 58.37 | 54.49 | 55.78 | 26.81 | 22.30 | 17.45 | 17.50 | 10.55 |
| Grammar | 75.57 | 56.01 | 48.71 | 38.72 | 17.25 | 16.24 | 21.84 | 9.52 | 3.13 |
| Independent | 76.39 | 55.22 | 51.10 | 48.09 | 19.90 | 16.30 | 12.93 | 12.55 | 11.24 |
| Secondary Modern | 52.69 | 57.16 | 56.36 | 61.63 | 31.97 | 29.42 | 24.82 | 28.06 | 14.80 |

Figure 2 presents the comparison of the prediction accuracies between 5 schools types. At grade $\mathrm{A}^{*}$, Independent schools and Grammar schools had the highest prediction accuracies in comparison with City Academy and Comprehensive schools which had lower accuracy, Secondary Modern schools had the lowest prediction accuracy at grade $A^{*}$. It is interesting to see that at grade $A$, there were very similar prediction accuracies (around 57\%) across all school types. At grade B, the prediction accuracies were still quite similar, but at grade C and below Secondary Modern schools had the highest prediction accuracy, followed by Comprehensive schools and City Academies. Independent schools and Grammar schools had the lowest prediction accuracy at all grades below B, except at grade F.

Figure 2: Comparison of the prediction accuracies between school types, by final grade.

Finally, we investigated the prediction accuracies across all OCR test centres (schools) with more than 30 entries ( $\mathrm{n}=2,817$ ). Figure 3 shows the distribution of prediction accuracy across these centres in the June 2013 Session. The average prediction accuracy was $47.50 \%$ and 1,105 test centres achieved 50 percent of prediction accuracy or above.

Figure 3: Prediction accuracy for all OCR test centres (with more than 30 entries in each centre).

Figure 4 presents box plots of the distribution of prediction accuracies by different school types for all OCR test centres (with more than 30 entries). Independent schools and Grammar schools had the highest medians of the prediction accuracy among the five groups. Comprehensive schools and Secondary modern schools had the lowest medians of prediction accuracy. In terms of Inter-quartile range (IQR) which measures the statistical dispersion, Grammar schools had the shortest IQR among all school types. Independent schools, Secondary modern schools and Comprehensive schools had the longest IQRs, which indicates that the prediction accuracies for these school types show substantially more variation than the prediction accuracies for Grammar schools or City academies.

Figure 4: Distribution of prediction accuracies by school types for all OCR test centres (with more than 30 entries in each centre).

## Appendix 1- GCSE Subject Groups

| Group | Subject |
| :---: | :---: |
| Arts | Expressive Arts <br> Media Studies <br> Music <br> Art \& Design <br> Performing \& Expressive Arts |
| Business, Leisure \& Tourism | Applied Business <br> Business <br> Business Studies <br> Law <br> Leisure \& Tourism <br> Physical Education |
| ICT/Technology | Applied ICT <br> Design and Technology <br> Engineering <br> ICT <br> Manufacturing <br> Health and Social Care <br> Home Economics |
| Social Science | Ancient History <br> Classical Civilisation <br> Economics <br> Geography <br> History <br> Humanities <br> Psychology <br> Religious Studies <br> Sociology <br> Citizenship Studies |
| Science/Maths | Additional Applied Science <br> Additional Science <br> Applied Science <br> Biology <br> Chemistry <br> Mathematics <br> Physics <br> Science |
| Languages | Classical Greek <br> Dutch <br> English <br> English Literature <br> French <br> German <br> Gujarati <br> Latin <br> Persian <br> Portuguese <br> Spanish <br> Turkish <br> Biblical Hebrew |
